PROGRAM CODE

```
def minimax(depth, node, maximizing):
    if depth == 0:
        return node

    if maximizing:
        return max(minimax(depth-1, x, False) for x in node)
    else:
        return min(minimax(depth-1, x, True) for x in node)

tree = [3, 5, 2, 9]
print("Best value:", minimax(1, tree, True))
```

OUTPUT

```
Game Over
PS D:\AI LAB Vijay> & C:/Users/SAIL/AppData/Loca
Vijay/Exp13"
Best value: 9
PS D:\AI LAB Vijay>
```
