PROGRAM CODE

```
def alphabeta(depth, node, alpha, beta, maximizing):
    if depth == 0:
        return node

    if maximizing:
        best = -999
        for x in node:
            best = max(best, alphabeta(depth-1, x, alpha, beta, False))
            alpha = max(alpha, best)
            if beta <= alpha:
                break
        return best
    else:
        best = 999
        for x in node:
            best = min(best, alphabeta(depth-1, x, alpha, beta, True))
            beta = min(beta, best)
            if beta <= alpha:
                break
        return best

tree = [3, 5, 2, 9]
print("Best value:", alphabeta(1, tree, -999, 999, True))
```

OUTPUT

```
PS D:\AI LAB Vijay> & C:/Users/SAIL/AppData/Local/Programs/Python/Python311/python.exe "d:/A
Vijay/Exp14"
Best value: 9
PS D:\AI LAB Vijay>
```
